

The Joy of Accomplishment

by **STANLEY**

The Joy of Accomplishment

Are you enjoying the fun of home handiwork? Do you know the satisfaction and relaxation of a hobby that turns idle hours into happy, productive pastime? Have you ever planed a rough piece of mahogany and had the joy of seeing the shavings curl up, revealing the beautiful grain of the wood, so attractive and smooth you just had to run your hand over it? Have you ever experienced the thrill of accomplishment that comes when you look at the fulfillment of your dreams and can say, "I made that?"

To the man who has discovered the joy of a creative hobby, these are experiences that add zest to living.

Home woodworking is an absorbing hobby that all can enjoy. Today, more and more men and boys are seeking the joy of accomplishment. The growing popularity of home handicraft is little short of amazing. An authentic source has made the statement that 750,000 persons are engaged in this absorbing hobby. The formation of home workshop clubs in hundreds of localities, has brought together men with a common interest in handicraft. Here they can exchange ideas, tell each other of their accomplishments and help beginners with advice born of experience. Hunt up one of these clubs. You may be sure they will welcome you, for there are no men more genial and free-hearted than these homecrafters.

In their home workshops many professional and business men find much needed diversion from their everyday problems. Here they give expression to creative impulses. Who knows but what some products of their handiwork will be cherished possessions in years to come. In many cases fathers and sons have become closer comrades by sharing in the same handicraft hobby.

Most boys take to woodworking as ducks take to water. Have you ever watched a boy, or a group of boys, fascinated and absorbed in making a bird house, boat, airplane, table, or what not? Their eagerness and enthusiasm are a joy to see — no thoughts of devilry

there. No matter if the finished results are mediocre, the wood and work are doing something for them—teaching them the use of their hands, developing creative ability, teaching patience, and giving them a keener appreciation of craftsmanship. And isn't a boy happy when he brings his work to mother? Encourage your boys in this wholesome avocation, for their lives will be richer and happier.

Handicraft is packed with romance and tradition. There is a special kind of delight in making the sturdy colonial furniture in the same way as did the early settlers. The craftsmanship of Chippendale, Hepplewhite, Duncan Phyfe, and other masters, takes on new meaning as you strive to reproduce their work. Every kind of wood that you use has a charm and story of its own, and the tools that you use have a history which extends back to the crude implements used many generations ago.

There are unlimited, interesting possibilities in handicraft work. It may be that wood carving, reproducing of antiques, making of model boats, toys, puzzles or furniture for the home will catch your fancy. No matter if you make one, or many kinds of things, every article you make is a new and complete diversion. Into it will go your thought and your individuality, all of which helps to identify that article as distinctly yours. In detail, it will be unlike anything else, for it is rare that two pieces of hand work are ever exactly alike.

Have you been saying that some day you would have a hobby? Have you dreamed of a day when you could look upon a piece of work, finished with a craftsman's touch and say, "I designed and made that?" Why delay longer? Clean out a space in your attic, garage, or basement, get a few tools and give expression to that urge.

Begin in a small way. Each new experience and success will inspire your ambition to carry on to a greater degree of accomplishment. Your appreciation of your hobby will grow in proportion to your effort. Your workshop will become a playground in which you will find relief from a strained business day. You will catch yourself whistling as you work, and your life will take on a new joy — the joy of accomplishment.

Selecting Tools for a Home Workshop

When you start a home workshop you are naturally in some doubt as to the first tools to buy. To help you make a proper selection, we have compiled a list of tools needed for woodworking.

The expense of procuring the tools listed should not be discouraging if you begin with the minimum set which we have listed as Primary Tools. The other tools may be added as the need presents itself.

A work bench can be bought or made at home. If you decide to make your bench, the "Book of 16 Plans" will give you all necessary details. On the

back page you will find complete information about Stanley Plans that are available.

Be sure you get good tools. We cannot emphasize this too strongly. The long life of a quality tool makes it decidedly more economical. A tool that is designed and made right will give you confidence as you use it. Manufacturers put their name on quality tools and make every effort to guard against defects in material and workmanship. This assurance of quality is well worth the small difference in price. Good tools, like good friends, wear well. You will take pride in their possession.

Select your tools carefully, and gradually add to your set as required.

On the list of tools below, we have starred (*) a few of the common tools we recommend for persons who live in an apartment and who want just a few tools for handy repairs, such as putting up cup hooks, curtain rods, etc.

These tools should be a part of every home. Keep them handy and you'll be surprised how often you will find a need for them. You will wonder how you ever got along without them.

Primary Tools

	Stanley No.
*1 Nail Hammer 13 oz.....	52
1 Combination Square 12".....	21

Send for this catalog. It describes and illustrates over 1500 STANLEY TOOLS. In addition, it contains tables on weights and measures, and useful data on lumber.

Stanley Tool Guide

25¢

A Real Help For All Tool Users!

Here is a book that you will never lend, because you will be constantly referring to it. This Tool Guide or Manual contains thirty-two big pages (sizes 11" x 12") of information on how to use and how not to use all of the common woodworking tools as well as some metal working tools. Much of the information has never before been made available to the home-craftsmen. It is profusely illustrated, in fact there are more pictures than words. Opened to the center, it presents a visual index that eliminates hunting for the information you want.

After you get your copy we believe you will say it is the best twenty-five cent investment you ever made.

This thirty-two page book contains complete directions, bill of materials and drawings for making sixteen different items: work bench, folding breakfast unit, circus toy, lazy chair, end table, model airplane, Cape Cod cottage for birds, tool cabinets, sawhorse, magazine rack, window cornices, drop-leaf coffee table, boy's desk, airplane, sewing stand, and combination table cupboard.

No bigger value in a plan book or plans has yet been presented to the woodworking hobbyist. Get your copy and enjoy the fun of making things in your homeworkshop.

"How to Work with Tools and Wood"

REVISED
EDITION

\$1.00

Have you ever asked yourself, "How would a professional do this?" Here, then, is the book you have been looking for! It takes the mystery out of using tools, selecting materials, planning and finishing work. It opens the way to make useful projects, to repair furniture and do odd jobs around your home.

The book contains 188 pages of useful information and more than 150 illustrations and diagrams. A complete cross index makes it an instant reference book. The stiff board cover with colorful binding makes it an attractive and durably bound book.
